No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 156, Application US/09169789
Patent No. 6653528
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Bloksberg, Leonard N.
APPLICANT: Havukkala, 11kka
TITLE OF INVENTION: Materials and Methods for the
TITLE OF INVENTION: Modification of Plant Lignin Content
FILE REFERENCE: 11000.100352

US-09-169-789-156

Sequence 25, Application No. US20050150002A1
Publication No. US20050150002A1
GENERAL INFORMATION:
APPLICANT: DellaPenna, Dean
APPLICANT: Tian, Li
APPLICANT: Kim, Joonyul
TITLE OF INVENTION: Metabolism in Plants
TITLE OF INVENTION: Metabolism in Plants
CURRENT APPLICATION NUMBER: US/10/751,235
CURRENT FILING DATE: 2004-01-02
NUMBER OF SEQ ID NOS: 74
SOFTWARE: Patentin version 3.2
SEQ ID NO 25

The present invention relates to genes, proteins and methods comprising carotenoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microorganisms using LUT1 epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds that are potent entioxidants. The present sequence is thale cress LUT1 [cytochrome P450 monooxygenase (CYP97C1); AC3953130 genel CDNA. Note: The current sequence is that of thale cress LUT1 cDNA which is located on chromosome 3. New expression vector comprising a nucleic acid sequence encoding a polypeptide having monooxygenase P450 activity, useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds. Claim 10; SEQ ID NO 5; 135pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           99
                                                                                                                                                                                   The present invention relates to genes, proteins and methods comprising carotenoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microorganisms using LUT1 epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds that are potent antioxidants. The present sequence is thale cress LUT1 [cytochrome P450 monooxygenase (CYP97C1); A2551310 gene] genomic DNA. Note: The current sequence is that of thale cress LUT1 DNA which is located on chromosome

The invention relates a recombinant DNA construct comprising a polymucleotide having any of 5544 mucleotide sequences (CDNAs SED ID NO: 15-544) and encoding a polymeptide with any of 5544 maino acid sequences (SEQ ID NO: 545-11088). The CDNAs and proteins are from corn, soybean, Arabidopsis, wheat and rape but the specification does not indicate which capanism. Also included is a method of sequences is derived from with organism. Also included is a method of proteining a plant having an improved property, comprising transforming a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region of plant with a recombinant DNA construct comprising a promoter region of plant with a recombinant DNA construct comprising transformed to polypeptide associated with the property, and growing the transformed polypeptide associated with the property, and growing the transformed of plant property is selected from improving plant coll tolerance. for pathway, for improving plant tolerance to plant disease, for glactomannan production, for production of plant sprowth requilators, for increasing the rate of improving plant tolerance to herbicides, for increasing the rate of collerance to extreme osmotic conditions for increasing the rate of the collerance to extreme osmotic conditions, for increasing plant tolerance to extreme osmotic conditions, for increasing plant tolerance to extreme osmotic conditions, for increasing the rate of modifying seed protein yield and/or content, for modifying seed protein yield and/or content, for modifying seed protein to peats, for yield improvement by modification of carbohydrate, introgen or phosphorus use and/or uptake modifying seed protein by providing improved plant growth and also encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and encode a plant transcription factor. The methods with improving plant tolerance to extreme osmotic and frought
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improved biological characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTTACTCTTCTCTTCACTGCAAAA 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        computer-based storage and e of the 5544 plant cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             analysis systems. The present sequence is one of the 5544 plant cDNA sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Indels 494;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 3377;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 3377 BP; 967 A; 729 C; 736 G; 945 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to genes, proteins and methods comprising carotenoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microoxyganisms using LUT1 epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds that are potent antioxidants. The present sequence is wheat cytochrome P450 monooxygenase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to genes, proteins and methods comprising carotenoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microorganisms using LUT1 epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds that are potent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  534 TAAAGTGTTTTGTAAATGTGCTGAGATTGGTGGAAAAGCTCGAGACATATGCTTTGAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to genes, proteins and methods comprising carotenoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microorganisms using LUTI epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds that are potent antioxidants. The present sequence is rice cytochrome P450 monooxygenase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        847
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       353
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    907
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 413
                                                                                                                    The present invention relates to genes, proteins and methods comprising carotenoid monoxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microorganisms using LUT1 epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for antioxidants. The present sequence is sunflower cytochrome P450 monooxygenase (CYP97C) cDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to genes, proteins and methods comprising carotenoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microorganisms using LUT1 epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds that are potent antioxidants. The present sequence is tomato cytochrome P450 monooxygenase (CYP97C) cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTTAAAGAAGCTGAGCTTCGTTCTACTGATCTTCTGCCATATTGGAAGGCAAGTTTCCTG 956

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to genes, proteins and methods comprising carotenoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microoxyganisms using LUT1 epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds that are potent antioxidants. The present sequence is maize cytochrome P450 monooxygenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  870

The present invention relates to genes, proteins and methods comprising carotenoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microorganisms using LUT1 epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds that are potent antioxidants. The present sequence is thale cress cytochrome P450 monooxygenase (CYP97A) DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               917
                                                                                                                     The present invention relates to genes, proteins and methods comprising carotemoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotemoid ratios in plants and microorganisms using LUT1 epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotemoid production in a plant for antioxidants. The present sequence is thale cress cytochrome P450 monooxygenase (CYP97A) DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Soybean cytochrome P450 97A (CYP97A) protein"

                                                                                                                                                                                                                                                                                                     The present invention relates to genes, proteins and methods comprising carotenoid monooxygenases in the cytochrome P450 family. The invention also relates to altering carotenoid ratios in plants and microorganisms using Lurl epsilon-hydroxylases and/or CYP97A beta-hydroxylases. The invention is useful in altering the carotenoid production in a plant for enhancing production of specific carotenoid compounds that are potent antioxidants. The present sequence is soybean cytochrome P450
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; call cycle pathway; disease resistance; galactomannan production; lignin production; plant growth regulator;
